

ARION[®] FG

The Royal Class of Band Sawing

- ▲ Product Level S
- 🔍 Trapezoid tooth
- Solid materials
- ↕ Band width 54 x 1.1 - 100 x 1.1mm

Product Information

The Royal Class of Band Sawing

Discover the royal class of band sawing: with ARION[®] FG and its wear-resistant hard coating. With its carbide band saw blade, WIKUS has created a high-performance sawing tool that delivers maximum cutting power, shorter cutting times, and minimal cutting costs and material waste during the sawing process. Thanks to thin-cutting technology, users can benefit from maximum productivity and cost-effectiveness, especially when cutting steels.

Application Range

Application:

- Large series and mass cutting processes on high performance sawing machines
- Short piece production of solid materials, structural, case-hardened and tempering steels as well as cast iron
- Forging technology

Advantages:

- Extremely high cutting rate in continuous operation
- Significantly reduced cutting time and highest productivity
- Low material loss due to thin-cut technology and thereby savings in costs and production process
- Precise flatness of the cutting surfaces
- Excellent efficiency by high blade-life

Features:

- Carbide cutting edge with very wear-resistant grade
- Polished trapezoid tooth (FUTURA[®] geometry)
- Thin-cutting technology with very high blade stability
- Wear-resistant multi-layer hard coating on tooth edges and back edges

Technical Data

Materials Overview

- Case-hardening steels, spring steels and ball-bearing steels
- Nitrided steel, high-speed steel and tool steel
- Construction, deep-drawn and machining steels
- Carbon steels, and quenched and tempered steels
- Cast iron
