

DUROSET[®] NE

The set special design for non-ferrous metals

Product level 2

Hook tooth

Solid materials

Band width 20 x 0.9 - 34 x 1.1mm

Band width 3/4 x 0.035 - 1-3/8 x 0.042 Inch

Product Information

DUROSET[®] NE — The set special design for non-ferrous metals

The carbide band saw blade was specially developed by WIKUS for foundry applications for sawing non-ferrous metals. It is particularly convincing for contour and radius cuts on feeders and casting burrs, which are carried out with a manual feed.

Of course, the band saw blade also proves itself in automatic operation. With its high blade-life, it achieves disproportionately high cutting rates even under fluctuating conditions.

Application

- Contour and radius cuts on non-ferrous metals
- Automatic and especially manual feed
- Optimal sawing tool for manual machining of castings

Advantages

- High cutting performance increases productivity

- Particularly high resistance to abrasive wear
- Very high blade-life even in fluctuating conditions

Features

- Extra wide set for contour and radius cuts in non-ferrous metals
- Tooth edge made of specific carbide with special geometry for foundries
- Polished trapezoid tooth with positive rake angle

Materials Overview

- Aluminium / aluminium alloys
- Non-ferrous metals
